

# Unified Exposure Management for Modern Organisations

**Stop managing tools. Start managing risk.**

It's one platform that gives you the visibility of a SIEM, the automation of a SOAR and the simplicity that modern teams need.

**You're Riskiest Accounts**

HarborPoint Financial Group	78%
Medisync Health Systems	76%
Keystone Legal Solutions	54%
Vertex Manufacturing Co.	42%

**Recommendations**

- 1. Significant risk detected primarily targeted ports open in layer 4 of devices in your network.
- 2. Multiple devices are not reporting threat data, indicating it may lack Endpoint Detection and Response (EDR).

**Guardare unifies every system into one trusted view, turning disconnected data into actionable insight.**

**Optimise your security stack**  
Guardare maximises the tools you currently use by finding misconfigurations, gaps, and overlaps before attackers do.

**Smarter risk prioritisation**  
Guardare uses AI and human expertise together to uncover hidden risks, validate findings, and rank them by potential impact.

**Deep insight, plain language**  
See your entire environment in a single dashboard. Guardare turns chaotic data from your organisation's people, devices and software into insights and actionable steps.

**Scalable protection and compliance**  
Security should grow with your business. Guardare will help keep your business's security strong, protected and compliant, whether you have 50 or 1,000 employees.

Businesses of all sizes deserve enterprise-level protection without the price or complexity.

## Steps To Get Started

### Connect your environment in minutes

Guardare plugs into the tools you already trust, like endpoint detection, firewalls, identity, cloud infrastructure, and more.

### Find the risks other platforms miss

Our proprietary AI builds a unified risk graph of every user, device, and application. Guardare flags critical exposures and ranks them by business impact.

### Get step-by-step recommendations

Natural language instructions tell you exactly what to do, in order of importance, to help lower risk.

### Defend and improve over time

Every action helps Guardare learn from global data and your environment to anticipate threats and improve your security posture.

### Integrate With Tools You Trust

Our API integrations connect with hundreds of tools, using their data to enrich context, automate investigations, and accelerate response times.
