Business Case Study & Report

Introduction

How Amicis Group helped Chorley Group create a secure, resilient and centrally managed cyber environment.

Automotive Retail & Services

CHORLEY
GROUP

Big enough to cope, small enough to care

8 SITES

380 USERS

237 ENDPOINTS

Challenges & Objectives

Growing business. Growing cyber complexity.

Operating across eight sites, Chorley Group needed a more consistent and scalable approach to cyber security.

Growth had created challenges around visibility, identity, cloud security and the management of vulnerabilities across a distributed technology estate.

Challenges

- **Limited visibility** - Across users and endpoints
- **Inconsistent controls** - Across multiple locations
- **Identity & cloud risk** - Requiring stronger governance
- **Fragmented security** - Without centralised threat detection

Objective

Create a secure and scalable cyber framework that could support Chorley Group's continued growth.

The Amicis Group Solution

Amicis implemented **CyberGuard**, providing Chorley Group with centralised protection, governance and visibility across its multi-site operation.

Managed Detection & Response

Continuous threat monitoring and response

Identity & Cloud Protection

Stronger protection and access governance

Vulnerability Management

Continuous scanning and regular penetration testing

Cyber Awareness

Helping employees recognise cyber threats

Cyber Essentials

Supporting stronger controls and compliance

THE RESULTS

8 SITES

Operating within a consistent security framework

380 USERS

Protected through centralised cyber governance

237 ENDPOINTS

With improved visibility and protection

Centralised Resilience

From fragmented security Chorley Group now has greater visibility, stronger protection and a consistent cyber security framework across its entire operation.
