

Managed Detection & Response

Cyber threats now target endpoint, identity, cloud and Microsoft 365 environments. Amicis MDR helps you detect threats earlier, respond faster and improve cyber resilience.

24/7 monitoring

UK Based Analysts

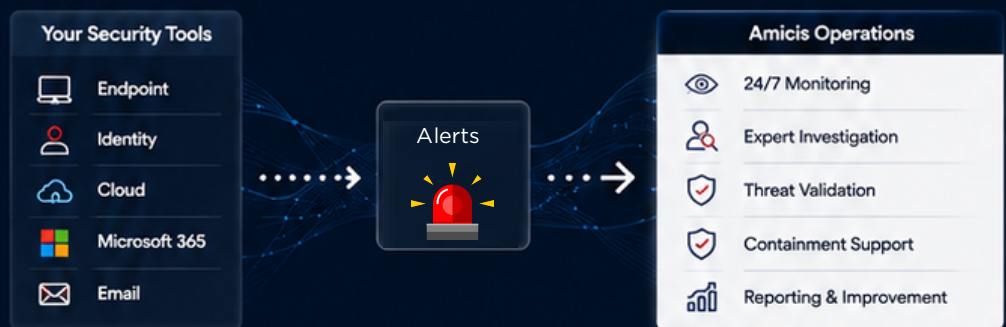

Threat Response

Works with existing tools

You already have tools. Who is operating them?

Many organisations have Microsoft Defender, CrowdStrike or other security platforms in place but lack the operational capability to continuously monitor, investigate and respond.

Why organisations use MDR

MDR vs EDR

EDR	VS	MDR
✓ Detection technology ✓ Endpoint-focused telemetry ✓ Generates alerts ✓ Requires internal resource		✓ 24/7 monitoring ✓ Analyst-led investigation ✓ Threat hunting and validation ✓ Response support and tuning

EDR provides the technology. MDR provides the people, process and operational capability.

Threats we can help Detect and Contain

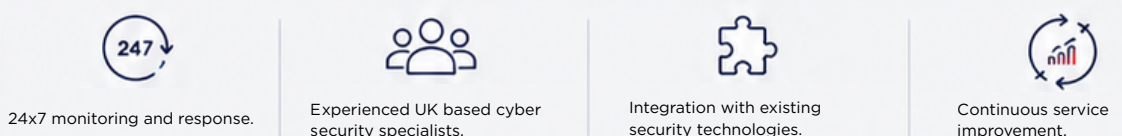

What Amicis MDR protects

Why Amicis

More than security tooling. A real operational cyber defence service.

Integrated cyber security services
